

TouchMedMobile: Extend & Enhance Your HIS or EHR

TouchMedMobile is a powerful mobile clinical application specifically designed for use with the iPhone, iPod Touch, iPad devices, and other mobile devices.

Integrating easily with any 3rd party healthcare information system, TouchMedMobile can aggregate and present clinical data from one or more information systems, utilizing the very familiar Apple controls to combine this information into a single, unified view.

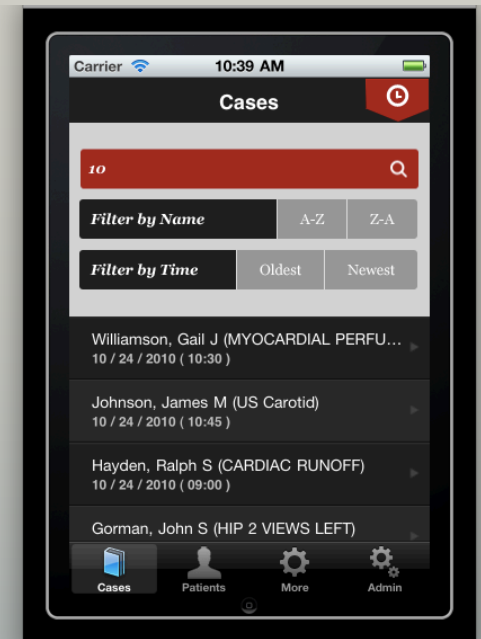

- Extend the life of your legacy information system.
- Add powerful clinical and marketing features.
- Enhance your organization's image in the referring community.

TouchMedMobile:
Medicine Gone Mobile

Extend & Enhance Your HIS or EHR

With TouchMedMobile, clinicians have instant access to complete patient histories and clinical information, as well as pending patient encounters, all of which can be integrated with mobile device calendars. Users can be assigned read only or read/write privileges, can leverage all of the data entry and navigation tools available in the Apple environment, can collaborate with each other on demand, can directly engage other valuable clinical tools, and can receive informative marketing updates from the host organization.

Why TouchMedMobile?

- TouchMedMobile can be integrated with any 3rd party information system through HL7 or other techniques.
- TouchMedMobile provides anytime, anywhere access to information.
- TouchMedMobile can save clinician time.
- TouchMedMobile facilitates more informed decision-making and better patient care.
- TouchMedMobile extends the life of legacy systems by providing a simple bridge to modern, mobile device technologies.
- TouchMedMobile leverages existing network and hardware infrastructures.
- TouchMedMobile unifies information from multiple, disparate information systems.
- TouchMedMobile can be deployed in a very cost effective manner.
- TouchMedMobile can provide read and write capabilities.
- TouchMedMobile provides marketing tools to connect with the referring community.
- TouchMedMobile can be easily customized without programming.
